

Do you know your skin type?

Appropriate evaluation of your skin type is essential to providing the most effective laser treatment. Skin type is categorized according to the Fitzpatrick skin type scale which ranges from very fair (skin type I) to very dark (skin type VI).

The two main factors that influence skin type and determine the correct treatment you require are:

- genetic disposition
- reaction to sun exposure and tanning habits

Skin type is determined genetically and is one of the many aspects of your overall appearance, which also includes the color of your eyes, hair and skin. The way your skin responds to sun exposure is another way of correctly assessing your skin type. Recent tanning, whether by the sun or an artificial tanning methods, even tanning creams, can have a major impact on your skin color evaluation.

By using the below information, Nad's skilled Laser Therapists will evaluate your appropriate skin type and provide you with the most effective Laser Hair Removal treatments. Please take a few minutes to fill out the below questionnaire.

To complete the questionnaire, simply select the Score number of the closest matching description for each question, tally all scores for each category and record the total in the Total Score space provided;
